Accounting for environmental cost - LSE Research Online

ABC allocates internal costs to cost centres and cost drivers on the basis of the activities that give rise to the costs. In an environmental accounting context, it distinguishes between environment-related costs, which can be attributed to joint cost centres (e.g. incinerators and sewage plants), and environment-driven costs, which tend to be hidden on general overheads, e.g. increased ...

Accounting for nature as a valuable asset - lse.ac.uk

Environmental full-cost accounting (EFCA) is a method of cost accounting that traces direct costs and allocates indirect costs by collecting and presenting information about the possible environmental, social and economical costs and benefits or advantages – in short, about the "triple bottom line" – for each proposed alternative. It is also known as true-cost accounting (TCA), but, as ...

Environmental full-cost accounting - Wikipedia

Environmental accounting is an attempt to broaden the scope of the accounting frameworks used to assess economic performance, to take stock of elements that are not recorded in public or private accounting books. These gaps occur because the various costs of using nature are not captured, being considered, in many cases, as externalities that can be forwarded to others or postponed.

Question: Which is a primary use for national income accounting? a) To analyze the environmental cost of economic growth. b) To assess the economic efficiency of specific industries in the economy.

Which is a primary use for national income accounting? a ...

True-price/full-cost accounting was a foundation concept on which we developed green ideas to deal with a wide-spectrum of environmental, green business challenges. The smog in Los Angeles in the 1950's for example, which was as bad as any city internationally, had profound negative consequences, especially damaging children's health.
