Figure 1. Child Looking at Bones. Bone is a living tissue. Unlike the bones of a fossil made inert by a process of mineralization, a child's bones continue to grow and develop while contributing to the support and function of other body systems.

Introduction - Anatomy and Physiology

Because symptoms of endocrine disorders can begin insidiously and may be nonspecific, clinical recognition is often delayed for months. For this reason, biochemical diagnosis is usually essential; it typically requires measuring blood levels of the peripheral endocrine hormones, the pituitary hormone, or both.

Overview of Endocrine Disorders - Endocrine and Metabolic ...

Neural and Endocrine Signaling. The nervous system uses two types of intercellular communication—electrical and chemical signaling—the direct action of an electrical potential, or in the latter case, through the action of chemical neurotransmitters such as serotonin or norepinephrine.
