### Constraint Processing - 1st Edition

Constraint logic programming is a form of constraint programming, in which logic programming is extended to include concepts from constraint satisfaction.A constraint logic program is a logic program that contains constraints in the body of clauses. An example of a clause including a constraint is A (X, Y):-X + Y > 0, B (X), C (Y).In this clause, X + Y > 0 is a constraint; A(X,Y), B(X), and C ...

It would not be a complete First look-report if there wasn't any comment about the support of Element in the tested CP system (see for example Learning constraint programming - part II: Modeling with the Element constraint). In one way, how Element is supported can be seen as a proxy of the "expressiveness" of a CP system and its host language.
