Description: With the Half-Life Laboratory, students gain a better understanding of radioactive dating and half-lives. Students are able to visualize and model what is meant by the half-life of a reaction. By extension, this experiment is a useful analogy to radioactive decay and dating. Students use M&M's (or pennies and puzzle pieces) to demonstrate ...

Publication history. Michael Holt was created by John Ostrander and Tom Mandrake and first appeared in Spectre (vol. 3) #54 (June 1977). A fictional character biography. At a very young age, Michael Holt shows remarkable intelligence, reading and assimilating the works of Albert Einstein, Bohr, Albert Einstein, Max Planck and Richard Feynman, the pantheon of theoretical physics.

There are studies which are rooted in analytic philosophy of science but address specifically the relation of technology to society and culture, and equally the relevance of social relations to practices of technology, without taking an evaluative stand with respect to technology; an edited volume by Preston 2012.

In-space transportation technology must be available at NASA technology readiness level of 6 or higher by year 2005. For this study payload masses are 1,400 and 4,500 kg; A single RLV launch transports 11,000 kg to and from LEO. LEO transportation weight is defined as LEO delivery weight plus associated airborne support equipment (ASE) weight.

Magnetism and electricity involve the attraction and repulsion between charged particles and the forces exerted by these charges. The relationship between magnetism and electricity is called electromagnetism. The movement of a magnet can generate electricity. The flow of electric current can generate a magnetic field.

Anthropogenic risks, by contrast, are of relatively recent vintage, dating from the beginning of the atomic era in 1945. That, Ord says, was when "our rapidly accelerating technological power finally reached the threshold where we might be able to destroy ourselves," as Einstein and others warned at the time.

Geological evidence shows that ancient Mars had large volumes of liquid water. Models of past hydrogen escape to space, calibrated with observations of the current escape rate, cannot explain the present-day D/H isotope ratio. We simulate volcanic degassing, atmospheric escape, and crustal hydration on Mars, incorporating observational constraints from spacecraft, rovers and meteorites. We ...

Quantum key distribution—exchanging a random secret key relying on a quantum mechanical resource—is the core feature of secure quantum networks. Entanglement-based protocols offer additional layers of security and scale favorably with quantum repeaters, but the stringent requirements set on the photon source have made their use situational so far.
