The “adaptive controller” (AC) is a kind of controller more robust than the “robust controller” (RC) :-) I give an explanation. Robust controllers - which, don't forget, have fixed control parameters - are expected to work well with plants which c...

varying parameters; robust control guarantees that if the changes are within given bounds the control law need not be changed, while adaptive control is concerned with control law changing itself.

Adaptive control - Wikipedia

Robust Adaptive Control of Feedback Linearizable MIMO Nonlinear Systems With Prescribed Performance Abstract: A novel robust adaptive controller for multi-input multi-output (MIMO) feedback linearizable nonlinear systems possessing unknown nonlinearities, capable of guaranteeing a prescribed performance, is developed in this paper.

For those interested in the state of the art in robust adaptive control, this book forms an excellent source for the interplay between robustness and dynamics of adaptive elements in control design. Whereas this text ties together developments of the past 3 decades with more classical notions, it is also a nice segue into the recent L1-adaptive control formulations.
